

Who is being tested and why?

Testing is important because you could be carrying the virus and may spread it to others. Testing all staff and pupils of secondary age and above (11+) without symptoms will support the education sector to continue to operate.

Simple and quick tests using antigen Lateral Flow Devices (LFD) enable the rapid testing of staff and secondary age pupils and students, from their home, without the need for a laboratory. Education settings will be provided with these test kits to distribute to their staff and students so that they can conduct testing at home.

Testing will help to break chains of transmission

You will need to:

- carry out twice weekly testing at home (3 to 4 days apart) before coming into the education setting in the morning
- maintain 'hand-face-space'

IMPORTANT: Tests are only for the use of the person assigned the kits, they should not be taken by anyone else.

 This asymptomatic testing programme does not replace current guidance for those with symptoms or those identified as a close contact of a positive case. Anyone with symptoms, whether they are involved in this programme or not, should book [a free NHS test](#) and follow government self-isolation guidance until the results of their test are known. Testing also does not replace basic preventative measures such as regular handwashing, PPE and social distancing.

Testing at home – the process

-  It is recommended that you **test yourself in the morning** before attending your education setting (so there is less chance you get infected between taking the test and attending the setting). However, you may choose to do the testing the evening before, especially the first time, to give you more time to get accustomed to the test, and to have more time for your education setting to react to a positive test result.
-  If you receive a positive LFD result you should [book a confirmatory PCR test](#). We would advise visiting a community or drive through test site as this is the quickest way to get tested, or you can order a home test kit. It is important that you self-isolate until the result of your PCR test.
